React Counter

Create a new React component that displays a counter on the page using JSX.
The counter should start at 0 and increase by 1 each time a button is clicked.
The component should have the following features:
1. Display the current count.
2. Display a button next to the count that increases the count by 1 each time it is clicked.
3. Use the useState hook to maintain the state of the count.
4. Create another button that decreases the count by 1.
5. Create another button that resets the count to 0.
6. Create another button that multiplys the current count.
