CSS Linking

As you may recall, in our previous lessons we discussed the portion inside our HTML that is responsible for the logistics - the header!

Let's use this to attach our CSS to the index.html.

To do so, we will need to link our CSS inside the header, as shown below:

```html
<head>
  <link rel="stylesheet" type="text/CSS" href="style.css" />
  <title></title>
</head>
```

We used the <link> tag, in which we entered two additional tags.

- type
- href

  – The "type" tag helps our HTML understand what we are linking.

  – The "href" tag helps our HTML understand what the name of our linked file is.

Since both index.html and style.css are in the same folder, we can simply write style.css.
